HERMITE-HADAMARD-FEJER TYPE INEQUALITIES FOR $s-$CONVEX FUNCTION IN THE SECOND SENSE VIA FRACTIONAL INTEGRALS

ERHAN SET★, İMDAT İSCAN▲, AND HASAN HÜSEYIN KARA■

ABSTRACT. In this paper, we established Hermite-Hadamard-Fejer type inequalities for $s-$convex functions in the second sense via fractional integrals. The some results presented here would provide extansions of those given in earlier works.

1. INTRODUCTION

The following inequality is well known in the literature as the Hermite-Hadamard integral inequality[10]:

$$f\left(\frac{a+b}{2}\right) \leq \frac{1}{b-a}\int_a^b f(x)\,dx \leq \frac{f(a)+f(b)}{2} \tag{1.1}$$

where $f : I \subset \mathbb{R} \to \mathbb{R}$ is a convex function on the interval I of real numbers and $a.b \in I$ with $a < b$. A function $f : [a,b] \subset \mathbb{R} \to \mathbb{R}$ is said to be convex if whenever $x, y \in [a,b]$ and $t \in [0,1]$ the following inequality holds

$$f(tx + (1-t)y) \leq tf(x) + (1-t)f(y). \tag{1.2}$$

In [9], Fejér gave a generalization of the inequalities (1.1) as the following:

If $f : [a,b] \to \mathbb{R}$ is a convex function, and $g : [a,b] \to \mathbb{R}$ is nonnegative, integrable and symmetric about $\frac{a+b}{2}$, then

$$f\left(\frac{a+b}{2}\right)\int_a^b g(x)\,dx \leq \int_a^b f(x)\,g(x)\,dx \leq \frac{f(a)+f(b)}{2}\int_a^b g(x)\,dx\ . \tag{1.3}$$

If $g \equiv 1$, then we are talking about the Hermite–Hadamard inequalities.More about those inequalities can be found in a number of papers and monographies (for example, see [7]-[19]).

In [11], Hudzik and Maligrada considered among others the class of functions which are s-convex in the second sense.

Definition 1. *A function $f : [0,\infty) \to \mathbb{R}$ is said to be s-convex in the second sense if*

$$f(\lambda x + (1-\lambda)y) \leq \lambda^s f(x) + (1-\lambda)^s f(y). \tag{1.4}$$

for all $x, y \in [0,\infty)$, $\lambda \in [0,1]$ and for some fixed $s \in (0,1]$.

2000 *Mathematics Subject Classification.* 26D07, 26D15.

Key words and phrases. s-convex Function, Hermite-Hadamard inequality, Hermite-Hadamard-Fejer inequality, Riemann-Liouville fractional integral.

It can be easily seen that $s = 1$, s-convexity reduces to ordinary convexity of functions defined on $[0, \infty)$.

In [7], Dragomir and Fitzpatrick proved Hadamard's inequality which holds for s-convex functions in the second sense.

Theorem 1. *Suppose that $f : [0, \infty) \to [0, \infty)$ is an s-convex functions in the second sense, where $s \in (0, 1)$, and let $a, b \in [0, \infty)$, $a < b$. If $f \in L[a, b]$, then the following inequalities hold:*

$$2^{s-1} f\left(\frac{a+b}{2}\right) \leq \frac{1}{b-a} \int_a^b f(x)\, dx \leq \frac{f(a) + f(b)}{s+1} \tag{1.5}$$

We give some necessary definitions and mathematical preliminaries of fractional calculus theory which are used throught this paper.

Definition 2. *Let $f \in [a, b]$. The Riemann − Liouville integrals $J^{\alpha}_{a+} f$ and $J^{\alpha}_{b-} f$ of order $\alpha > 0$ with $a \geq 0$ are defined by integrals hold:*

$$J^{\alpha}_{a+} f(x) = \frac{1}{\Gamma(\alpha)} \int_a^x (x-t)^{\alpha-1} f(t)\, dt, \quad x > a \tag{1.6}$$

and

$$J^{\alpha}_{b-} f(x) = \frac{1}{\Gamma(\alpha)} \int_x^b (t-x)^{\alpha-1} f(t)\, dt, \quad x < b$$

respectively where $\Gamma(\alpha) = \int_0^{\infty} e^{-t} u^{\alpha-1} du$. Here is $J^0_{a+} f(x) = J^0_{b-} f(x) = f(x)$

In the case of $\alpha = 1$, the fractional integral reduces to the classical integral. The recent results and the properties concerning this operator can be found ([1]-[6])

In [15], Sarıkaya *et.al.* represented Hermite-Hadamard's inequalities in fractional integral forms as follows.

Theorem 2. *Let $f : [a, b] \to \mathbb{R}$ be positive function with $0 \leq a < b$ and $f \in L[a, b]$. If f is a convex function on $[a, b]$, than the following inequalities for fractional integrals hold*

$$f\left(\frac{a+b}{2}\right) \leq \frac{\Gamma(\alpha+1)}{2(b-a)^{\alpha}} \left[J^{\alpha}_{a+} f(b) + J^{\alpha}_{b-} f(a)\right] \leq \frac{f(a) + f(b)}{2} \tag{1.7}$$

with $\alpha > 0$.

In [12], İşcan gave the following Hermite-Hadamard-Fejer integral inequalities via fractional integrals:

Theorem 3. *Let $f : [a, b] \to \mathbb{R}$ be convex function with $a < b$ and $f \in L[a, b]$.If $g : [a, b] \to \mathbb{R}$ is nonnegative, integrable and symmetric to $(a+b)/2$, then the following inequalities for fractional integrals hold*

$$\begin{aligned} f\left(\frac{a+b}{2}\right) \left[J^{\alpha}_{a+} g(b) + J^{\alpha}_{b-} g(a)\right] &\leq \left[J^{\alpha}_{a+} (fg)(b) + J^{\alpha}_{b-} (fg)(a)\right] \\ &\leq \frac{f(a) + f(b)}{2} \left[J^{\alpha}_{a+} g(b) + J^{\alpha}_{b-} g(a)\right] \end{aligned}$$

with $\alpha > 0$.

Set *et al.* established some inequalities connected with the left-hand side of the inequality (1.3) used the following lemma.

Lemma 1. [19] *Let $f:[a,b]\to\mathbb{R}$ be a differentiable mapping on (a,b) with $a<b$ and let $g:[a,b]\to\mathbb{R}$. If $f',g\in L[a,b]$, then the following identity for fractional integrals holds:*

$$\begin{aligned}(1.8)\qquad & f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}g(b)\right]\\ & -\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}(fg)(b)\right]\\ =\ & \frac{1}{\Gamma(\alpha)}\int_a^b k(t)\,f'(t)\,dt\end{aligned}$$

where

$$k(t)=\begin{cases}\int\limits_a^t (s-a)^{\alpha-1}g(s)\,ds, & t\in\left[a,\frac{a+b}{2}\right]\\ -\int\limits_t^b (b-s)^{\alpha-1}g(s)\,ds, & t\in\left[\frac{a+b}{2},b\right]\end{cases}.$$

Set *et al. proved the following three theorems.*

Theorem 4. [19]*Let $f:I\to\mathbb{R}$ be a differentiable mapping on I° and $f'\in L[a,b]$ with $a<b$ and $g:[a,b]\to\mathbb{R}$ is continuous. If $|f'|$ is convex on $[a,b]$, then the following inequality for fractional integrals holds:*

$$\begin{aligned}(1.9)\qquad & \left|f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}g(b)\right]\right.\\ & \left.-\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}(fg)(b)\right]\right|\\ \leq\ & \frac{(b-a)^{\alpha+1}\,||g||_{[a,b],\infty}}{2^{\alpha+1}\Gamma(\alpha+1)(\alpha+1)}\left[|f'(a)|+|f'(b)|\right]\end{aligned}$$

with $\alpha>0$.

Theorem 5. [19] *Let $f:I\to\mathbb{R}$ be a differentiable mapping on I° and $f'\in L[a,b]$ with $a<b$ and $g:[a,b]\to\mathbb{R}$ is continuous. If $|f'|^q$ is convex on $[a,b]$, $q>1$, then the following inequality for fractional integrals holds:*

$$\begin{aligned}(1.10)\qquad & \left|f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}g(b)\right]\right.\\ & \left.-\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}(fg)(b)\right]\right|\\ \leq\ & \frac{(b-a)^{\alpha+1}\,||g||_{[a,b],\infty}}{2^{\alpha+1+1/q}(\alpha+1)(\alpha+2)^{1/q}\Gamma(\alpha+1)}\left\{\left((\alpha+3)|f'(a)|^q+(\alpha+1)|f'(b)|^q\right)^{1/q}\right.\\ & \left.+\left((\alpha+1)|f'(a)|^q+(\alpha+3)|f'(b)|^q\right)^{1/q}\right\}\end{aligned}$$

with $\alpha>0$.

Theorem 6. [19] *Let $f:I\to\mathbb{R}$ be a differentiable mapping on I° and $f'\in L[a,b]$ with $a<b$ and $g:[a,b]\to\mathbb{R}$ is continuous. If $|f'|^q$ is convex on $[a,b]$, $q>1$, then*

the following inequality for fractional integrals holds:

$$\begin{aligned}(1.11)\qquad &\left|f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}g(b)\right]\right.\\ &\left.-\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}(fg)(b)\right]\right|\\ \leq\ &\frac{(b-a)^{\alpha+1}\left|\left|g\right|\right|_{\infty}}{2^{\alpha+1+2/q}(\alpha p+1)^{1/q}\Gamma(\alpha+1)}\\ &\times\left[3\left|f'(a)\right|^{q}+\left|f'(b)\right|^{q1/q}+\left(\left|f'(a)\right|^{q}+3\left|f'(b)\right|^{q}\right)^{1/q}\right]\end{aligned}$$

where $1/p+1/q=1$.

We recall the following function:
The incomplete Beta function by

$$B_x(\alpha,\beta)=\int_0^x t^{\alpha-1}(1-t)^{\beta-1}\,dt.$$

In this paper, motivated by the recent results given in [11],[19], we establish Hermite-Hadamard-Fejer type inequalities for s-convex functions in the second sense via fractional integral. An interesting feature of our results is that they provide new estimates on these types of inequalities for fractional integrals.

2. MAİN RESULTS

Now, by using the Lemma 1 we prove our main theorems.

Theorem 7. *Let $f:I\subseteq[0,\infty)\to\mathbb{R}$ be a differentiable mapping on I^{o} and $f'\in L[a,b]$ with $a<b$ and $g:[a,b]\to\mathbb{R}$ is continious. If $|f'|$ is $s-convex$ on $[a,b]$ for some fixed $s\in(0,1]$, then the following inequality for fractional integrals holds:*

$$\begin{aligned}(2.1)\qquad &\left|f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}g(b)\right]\right.\\ &\left.-\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)^{-}}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)^{+}}(fg)(b)\right]\right|\\ \leq\ &\frac{(b-a)^{\alpha+1}\left|\left|g\right|\right|_{[a,b],\infty}}{\Gamma(\alpha+1)}\\ &\times\left\{B_{1/2}(\alpha+1,s+1)+\frac{1}{2^{\alpha+s+1}(\alpha+s+1)}\right\}\left[\left|f'(a)\right|+\left|f'(b)\right|\right].\end{aligned}$$

Proof. Since $|f'|$ is $s-convex$ on $[a,b]$ for some fixed $s\in(0,1]$, we know that for $t\in[a,b]$

$$\left|f'(t)\right|=\left|f'\left(\frac{b-t}{b-a}a+\frac{t-a}{b-a}b\right)\right|\leq\left(\frac{b-t}{b-a}\right)^{s}\left|f'(a)\right|+\left(\frac{t-a}{b-a}\right)^{s}\left|f'(b)\right|$$

From Lemma 1 we have

$$\begin{aligned}
&\left| f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)_-} g(a) + J^{\alpha}_{\left(\frac{a+b}{2}\right)_+} g(b)\right]\right. \\
&\left. - \left[J^{\alpha}_{\left(\frac{a+b}{2}\right)_-} (fg)(a) + J^{\alpha}_{\left(\frac{a+b}{2}\right)_+} (fg)(b)\right]\right| \\
\leq\ & \frac{1}{\Gamma(\alpha)}\left\{\int_a^{\frac{a+b}{2}} \left|\int_a^t (s-a)^{\alpha-1} g(s)\,ds\right| |f'(t)|\,dt\right. \\
&\left. + \int_{\frac{a+b}{2}}^b \left|\int_t^b (b-s)^{\alpha-1} g(s)\,ds\right| |f'(t)|\,dt\right\}
\end{aligned}$$

$$\begin{aligned}
\leq\ & \frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{(b-a)^s \Gamma(\alpha)} \int_a^{\frac{a+b}{2}} \left(\int_a^t (s-a)^{\alpha-1}\,ds\right)\left((b-t)^s |f'(a)| + (t-a)^s |f'(b)|\right) dt \\
&+ \frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{(b-a)^s \Gamma(\alpha)} \int_{\frac{a+b}{2}}^b \left(\int_t^b (b-s)^{\alpha-1}\,ds\right)\left((b-t)^s |f'(a)| + (t-a)^s |f'(b)|\right) dt \\
=\ & \frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{(b-a)^s \Gamma(\alpha+1)} \int_a^{\frac{a+b}{2}} (t-a)^{\alpha}\left[(b-t)^s |f'(a)| + (t-a)^s |f'(b)|\right] dt
\end{aligned}$$

$$\begin{aligned}
&+ \frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{(b-a)^s \Gamma(\alpha+1)} \int_{\frac{a+b}{2}}^b (b-t)^{\alpha}\left[(b-t)^s |f'(a)| + (t-a)^s |f'(b)|\right] dt \\
=\ & \frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{(b-a)^s \Gamma(\alpha+1)}\left[|f'(a)| \int_a^{\frac{a+b}{2}} (t-a)^{\alpha}(b-t)^s\,dt + |f'(b)| \int_a^{\frac{a+b}{2}} (t-a)^{\alpha+s}\,dt\right] \\
&+ \frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{(b-a)^s \Gamma(\alpha+1)}\left[|f'(a)| \int_{\frac{a+b}{2}}^b (b-t)^{\alpha+s}\,dt + |f'(b)| \int_{\frac{a+b}{2}}^b (b-t)^{\alpha}(t-a)^s\,dt\right]
\end{aligned}$$

$$
\begin{aligned}
&= \frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{(b-a)^s\Gamma(\alpha+1)} \\
&\quad\times\left[|f'(a)|(b-a)^{\alpha+s+1}B_{1/2}(\alpha+1,s+1)+|f'(b)|\frac{(b-a)^{\alpha+s+1}}{2^{\alpha+s+1}(\alpha+s+1)}\right] \\
&\quad+\frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{(b-a)^s\Gamma(\alpha+1)} \\
&\quad\times\left[|f'(a)|\frac{(b-a)^{\alpha+s+1}}{2^{\alpha+s+1}(\alpha+s+1)}+|f'(b)|(b-a)^{\alpha+s+1}B_{1/2}(\alpha+1,s+1)\right] \\
&= \frac{(b-a)^{\alpha+s+1}}{(b-a)^s\Gamma(\alpha+1)} \\
&\quad\times\left\{||g||_{\left[a,\frac{a+b}{2}\right],\infty}\left(|f'(a)|B_{1/2}(\alpha+1,s+1)+|f'(b)|\frac{1}{2^{\alpha+s+1}(\alpha+s+1)}\right)\right. \\
&\quad\left.+||g||_{\left[\frac{a+b}{2},b\right],\infty}\left(|f'(a)|\frac{1}{2^{\alpha+s+1}(\alpha+s+1)}+|f'(b)|B_{1/2}(\alpha+1,s+1)\right)\right\} \\
&\leq \frac{(b-a)^{\alpha+1}||g||_{[a,b],\infty}}{\Gamma(\alpha+1)} \\
&\quad\times\left\{B_{1/2}(\alpha+1,s+1)[|f'(a)|+|f'(b)|]+\frac{1}{2^{\alpha+s+1}(\alpha+s+1)}[|f'(a)|+|f'(b)|]\right\} \\
&= \frac{(b-a)^{\alpha+1}||g||_{[a,b],\infty}}{\Gamma(\alpha+1)} \\
&\quad\times\left\{B_{1/2}(\alpha+1,s+1)+\frac{1}{2^{\alpha+s+1}(\alpha+s+1)}\right\}[|f'(a)|+|f'(b)|]
\end{aligned}
$$

where

$$
\int_a^{\frac{a+b}{2}}(t-a)^{\alpha+s}\,dt=\int_{\frac{a+b}{2}}^b(b-t)^{\alpha+s}\,dt=\frac{(b-a)^{\alpha+s+1}}{2^{\alpha+s+1}(\alpha+s+1)}
$$

and

$$
\begin{aligned}
\int_a^{\frac{a+b}{2}}(t-a)^{\alpha}(b-t)^s\,dt &= \int_{\frac{a+b}{2}}^b(b-t)^{\alpha}(t-a)^s\,dt \\
&= (b-a)^{\alpha+s+1}B_{1/2}(\alpha+1,s+1).
\end{aligned}
$$

□

Remark 1. *In Theorem 7, if we choose $s=1$, then (2.1) reduces inequality (1.9) of Theorem 4.*

Theorem 8. *Let $f:I\subseteq[0,\infty)\to\mathbb{R}$ be a differentiable mapping on I^o and $f'\in L[a,b]$ with $a<b$ and let $g:[a,b]\to\mathbb{R}$ is continious. If $|f'|^q$ is $s-$convex on $[a,b]$ for some fixed $s\in(0,1]$, $q>1$, then the following inequality for fractional integrals holds:*

$$\begin{aligned}
&\left| f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)-}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)+}g(b)\right]\right.\\
&\left.-\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)-}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)+}(fg)(b)\right]\right|\\
\leq\ & \frac{(b-a)^{\alpha+1}\,||g||_{[a,b],\infty}}{2^{\alpha+1+\frac{1}{q}}(\alpha+1)(\alpha+2)^{1/q}(\alpha+s+q)^{1/q}\Gamma(\alpha+1)}
\end{aligned}$$

$$\begin{aligned}
(2.2)\qquad &\times\left\{\left((\alpha+s+1)(\alpha+3)|f'(a)|^q+2^{1-s}(\alpha+1)(\alpha+2)|f'(b)|^q\right)^{1/q}\right.\\
&\left.+\left(2^{1-s}(\alpha+1)(\alpha+2)|f'(a)|^q+(\alpha+s+1)(\alpha+3)|f'(b)|^q\right)^{1/q}\right\}.
\end{aligned}$$

Proof. Since $|f'|$ is $s-convex$ on $[a,b]$ for some fixed $s\in(0,1]$, we know that for $t\in[a,b]$

$$|f'(t)|^q=\left|f'\left(\frac{b-t}{b-a}a+\frac{t-a}{b-a}b\right)\right|^q\leq\left(\frac{b-t}{b-a}\right)^s|f'(a)|^q+\left(\frac{t-a}{b-a}\right)^s|f'(b)|^q$$

Using Lemma 1, power mean inequality and convexity of $|f'|^q$, it follows that

$$\begin{aligned}
&\left| f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)-}g(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)+}g(b)\right]\right.\\
&\left.-\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)-}(fg)(a)+J^{\alpha}_{\left(\frac{a+b}{2}\right)+}(fg)(b)\right]\right|\\
\leq\ & \frac{1}{\Gamma(\alpha)}\left(\int_a^{\frac{a+b}{2}}\left|\int_a^t(s-a)^{\alpha-1}g(s)\,ds\right|dt\right)^{1-1/q}\\
&\times\left(\int_a^{\frac{a+b}{2}}\left|\int_a^t(s-a)^{\alpha-1}g(s)\,ds\right||f'(t)|^q\,dt\right)^{1/q}\\
&+\frac{1}{\Gamma(\alpha)}\left(\int_{\frac{a+b}{2}}^b\left|\int_t^b(b-s)^{\alpha-1}g(s)\,ds\right|dt\right)^{1-1/q}\\
&\times\left(\int_{\frac{a+b}{2}}^b\left|\int_t^b(b-s)^{\alpha-1}g(s)\,ds\right||f'(t)|^q\,dt\right)^{1/q}\\
\leq\ & \frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{\Gamma(\alpha)}\left(\int_a^{\frac{a+b}{2}}\left|\int_a^t(s-a)^{\alpha-1}ds\right|dt\right)^{1-1/q}\\
&\times\left(\int_a^{\frac{a+b}{2}}\left|\int_a^t(s-a)^{\alpha-1}ds\right||f'(t)|^q\,dt\right)^{1/q}
\end{aligned}$$

$$+\frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{\Gamma(\alpha)}\left(\int_{\frac{a+b}{2}}^{b}\left|\int_{t}^{b}(b-s)^{\alpha-1}\,ds\right|dt\right)^{1-1/q}$$
$$\times\left(\int_{\frac{a+b}{2}}^{b}\left|\int_{t}^{b}(b-s)^{\alpha-1}\,ds\right||f'(t)|^{q}\,dt\right)^{1/q}$$

$$\leq \frac{1}{\alpha\Gamma(\alpha)}\left(\frac{(b-a)^{\alpha+1}}{2^{\alpha+1}(\alpha+1)}\right)^{1-1/q}$$
$$\times\left\{\frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{(b-a)^{s/q}}\left[\int_{a}^{\frac{a+b}{2}}\left((t-a)^{\alpha}(b-t)^{s}|f'(a)|^{q}+(t-a)^{\alpha+s}|f'(b)|^{q}\right)dt\right]^{1/q}\right.$$
$$\left.+\frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{(b-a)^{s/q}}\left[\int_{\frac{a+b}{2}}^{b}\left((b-t)^{\alpha+s}|f'(a)|^{q}+(b-t)^{\alpha}(t-a)^{s}|f'(b)|^{q}\right)dt\right]^{1/q}\right\}$$

$$= \frac{1}{\Gamma(\alpha+1)}\left(\frac{(b-a)^{\alpha+1}}{2^{\alpha+1}(\alpha+1)}\right)^{1-1/q}\left\{\left(\frac{||g||_{\left[a,\frac{a+b}{2}\right],\infty}}{(b-a)^{s/q}}\right.\right.$$
$$\left.\times\left[\left((b-a)^{\alpha+s+1}B_{1/2}(\alpha+1,s+1)|f'(a)|^{q}+\frac{(b-a)^{\alpha+s+1}}{2^{\alpha+s+1}(\alpha+s+1)}|f'(b)|^{q}\right)dt\right]^{1/q}\right)$$
$$+\left(\frac{||g||_{\left[\frac{a+b}{2},b\right],\infty}}{(b-a)^{s/q}}\right.$$
$$\left.\left.\left[\times\left(\frac{(b-a)^{\alpha+s+1}}{2^{\alpha+s+1}(\alpha+s+1)}|f'(a)|^{q}+(b-a)^{\alpha+s+1}B_{1/2}(\alpha+1,s+1)|f'(b)|^{q}\right)dt\right]^{1/q}\right)\right\}$$

$$\leq \frac{(b-a)^{\alpha+1}||g||_{[a,b],\infty}}{2^{\alpha+1+\frac{s}{q}}(\alpha+1)^{1-1/q}(\alpha+s+q)^{1/q}\Gamma(\alpha+1)}$$
$$\times\left\{\left(2^{\alpha+s+1}(\alpha+s+1)B_{1/2}(\alpha+1,s+1)|f'(a)|^{q}+|f'(b)|^{q}\right)^{1/q}\right.$$
$$\left.\left(|f'(a)|^{q}+2^{\alpha+s+1}(\alpha+s+1)B_{1/2}(\alpha+1,s+1)|f'(b)|^{q}\right)^{1/q}\right\}$$

$$\leq \frac{(b-a)^{\alpha+1}||g||_{[a,b],\infty}}{2^{\alpha+1+\frac{1}{q}}(\alpha+1)(\alpha+2)^{1/q}(\alpha+s+q)^{1/q}\Gamma(\alpha+1)}$$
$$\times\left\{\left((\alpha+s+1)(\alpha+3)|f'(a)|^{q}+2^{1-s}(\alpha+1)(\alpha+2)|f'(b)|^{q}\right)^{1/q}\right.$$
$$\left.+\left(2^{1-s}(\alpha+1)(\alpha+2)|f'(a)|^{q}+(\alpha+s+1)(\alpha+3)|f'(b)|^{q}\right)^{1/q}\right\}.$$

□

Remark 2. *In Theorem 8, if we choose $s = 1$, then (2.2) reduces inequality (1.10) of Theorem 5.*

Theorem 9. *Let $f : I \subseteq [0,\infty) \to \mathbb{R}$ be a differentiable mapping on I^o and $f' \in L[a,b]$ with $a < b$ and let $g : [a,b] \to \mathbb{R}$ is continious. If $|f'|^q$ is $s-$convex on $[a,b]$ for some fixed $s \in (0,1]$, $q > 1$, then the following inequality for fractional integrals holds:*

$$
\begin{aligned}
(2.3)\quad & \left| f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)_-} g(a) + J^{\alpha}_{\left(\frac{a+b}{2}\right)_+} g(b)\right]\right. \\
& \left. - \left[J^{\alpha}_{\left(\frac{a+b}{2}\right)_-}(fg)(a) + J^{\alpha}_{\left(\frac{a+b}{2}\right)_+}(fg)(b)\right]\right| \\
\leq\ & \frac{(b-a)^{\alpha+1}\,||g||_{[a,b],\infty}}{2^{\alpha+1+\frac{s}{q}}(\alpha p+1)(\alpha+2)^{1/p}(s+1)^{1/q}\Gamma(\alpha+1)} \\
& \times\left[\left(|f'(a)|^q\left(2^{s+1}-1\right)+|f'(b)|^q\right)^{1/q}+\left(|f'(a)|^q+|f'(b)|^q\left(2^{s+1}-1\right)\right)^{1/q}\right]
\end{aligned}
$$

where $\frac{1}{p}+\frac{1}{q}=1$.

Proof. Using Lemma 1, Hölder's inequality and the s-convex of $|f'|^q$ it follows that

$$
\begin{aligned}
& \left| f\left(\frac{a+b}{2}\right)\left[J^{\alpha}_{\left(\frac{a+b}{2}\right)_-} g(a) + J^{\alpha}_{\left(\frac{a+b}{2}\right)_+} g(b)\right] - \left[J^{\alpha}_{\left(\frac{a+b}{2}\right)_-}(fg)(a) + J^{\alpha}_{\left(\frac{a+b}{2}\right)_+}(fg)(b)\right]\right| \\
\leq\ & \frac{1}{\Gamma(\alpha)}\left[\int_a^{\frac{a+b}{2}}\left|\int_a^t (s-a)^{\alpha-1} g(s)\,ds\right|dt + \int_{\frac{a+b}{2}}^b\left|\int_t^b (s-a)^{\alpha-1} g(s)\,ds\right||f'(t)|^q\,dt\right] \\
\leq\ & \frac{1}{\Gamma(\alpha)}\left(\int_a^{\frac{a+b}{2}}\left|\int_a^t (s-a)^{\alpha-1} g(s)\,ds\right|^p dt\right)^{1/q}\left(\int_a^{\frac{a+b}{2}}|f'(t)|^q\,dt\right)^{1/q} \\
& + \frac{1}{\Gamma(\alpha)}\left(\int_{\frac{a+b}{2}}^b\left|\int_t^b (s-a)^{\alpha-1} g(s)\,ds\right|^p dt\right)^{1/q}\left(\int_{\frac{a+b}{2}}^b|f'(t)|^q\,dt\right)^{1/q} \\
=\ & \frac{1}{\Gamma(\alpha)}\left(\int_a^{\frac{a+b}{2}}\left|\int_a^t (s-a)^{\alpha-1} g(s)\,ds\right|^p dt\right)^{1/q} \\
& \times\left[\left(\int_a^{\frac{a+b}{2}}|f'(t)|^q\,dt\right)^{1/q} + \left(\int_{\frac{a+b}{2}}^b|f'(t)|^q\,dt\right)^{1/q}\right] \\
\leq\ & \frac{(b-a)^{\alpha+1}\,||g||_{[a,b],\infty}}{2^{\alpha+1+\frac{s}{q}}(\alpha p+1)(\alpha+2)^{1/p}(s+1)^{1/q}\Gamma(\alpha+1)} \\
& \times\left[\left(|f'(a)|^q\left(2^{s+1}-1\right)+|f'(b)|^q\right)^{1/q}+\left(|f'(a)|^q+|f'(b)|^q\left(2^{s+1}-1\right)\right)^{1/q}\right].
\end{aligned}
$$

Here we use

$$\int_a^{\frac{a+b}{2}} \left| \int_a^t (s-a)^{\alpha-1} g(s)\, ds \right|^p dt = \frac{(b-a)^{\alpha p+1}}{2^{\alpha p+1}(\alpha p+1)\alpha^p}$$

$$\int_a^{\frac{a+b}{2}} |f'(t)|^q dt \leq \frac{b-a}{2^{s+1}(s+1)} \left[|f'(a)|^q \left(2^{s+1}-1\right) + |f'(b)|^q \right]$$

$$\int_{\frac{a+b}{2}}^b |f\prime(t)|^q dt \leq \frac{b-a}{2^{s+1}(s+1)} \left[|f'(a)|^q + |f'(b)|^q \left(2^{s+1}-1\right) \right].$$

□

Remark 3. *In Theorem 9, if we choose* $s = 1$ *, then* (2.3) *reduces inequality* (1.11) *of Theorem 6.*
